

Abstract

A pressure washer includes a pump and an injector. The pump is configured to pump a fluid at a pressure that ranges from low to high. The injector has a nozzle and an external member, with the external member being positioned around the nozzle. The injector is
5 configured to spray at least one of a fluid or a fluid combined with a first chemical in the low pressure range, and at least one of a fluid or a fluid combined with a second chemical in the high pressure range. An injector is provided that includes a metallic nozzle and a non-metallic external member.
